

DE ENGINEERS ULTIMATE ROUND SHEEP FEEDERS

Optional
removable
rain guards.
\$240 inc gst

DE Engineers 'lick style' feeder is the only round feeder on the market that can save up to 50% of feed usage.

Our 'unique' feed ring reduces the amount of feed sheep can easily access. This stops overfeeding and spillage by forcing them to use their tongue to access feed from a 'Vee' shaped gap formed between the angled tray and the adjustable ring.

These feeders are so strong, they won't collapse with whole lupins and will also work well with pellets.

Other 'Unique' features:

Our feeders have the largest feed trough circumference, are built stronger from longer lasting 40nb galvanized pipe (not square tube) and the welded cone bases are fully trussed underneath with RHS framing with Skids and fork shoes.

Available in 1, 2 OR 3 body coils giving a capacity of :

4.2m³ = 2.3 Ton (Oats) = \$3350 + GST 1.8m high

8.6m³ = 4.75 Ton (Oats) = 3990 + GST 2.6m high

13m³ = 7.2 Ton (Oats) = \$4750 + GST 3.5m high

100mm blow tube = \$750 + GST
