Automatic Sheep Feeder

The DE Engineers Auto Sheep Feeder is the only auto feeder with a unique trough design that can be used as a 'Lick Style' feeder that can save up to 50% of feed usage.

Our 'unique' adjustable feed tray reduces the amount of feed sheep can easily access. This stops overfeeding and spillage by forcing sheep to use their tongue to access feed from a 'Vee' shaped gap formed between the angled tray and the adjustable feed box. The gap can also be adjusted for ad lib feeding.

The Auto feeder is uses 24 volt powered by solar with models up to 36m long, significantly reduces time and labour and can be fitted to any silo or Field Bin, simply keep the feed up to the storage bin and set the desired schedule.

Farm system:

55mm Tube with 24v BDL 3ph motor \$12,500- \$13,750 gst inc

Larger Commercial system:
76mm tube, 240v motor with
Victron 3000w solar inverter.
\$15,000 - \$16,500 gst inc

The 24m system has fed up to 700 sheep per side and can be made much longer.

Unit is supplied standard with 2 x 100amp batteries and 1 x 225w solar panel.
