

DE Engineers transportable water tank with a capacity of approximately 71,000 litres.

An ideal nurse system for watering sheep with plenty of uses, including as a storage unit when spraying, for fire fighters or even protecting a house, when fitted with a sprinkler system.

The base of the tank comprises a very strong ring beam from flat bar steel, enabling it to be placed on uneven ground while retaining its structural integrity.

Walking beam axles with hydraulic lift to transport over rough paddocks extending the life of the tank..

All seams are sealed with a waterproof membrane which can be easily re-applied by brush if necessary.

The Drought buster water tank is made without a plastic liner to make it more robust, easier to empty and clean out.

which is easily done by brushing with a rubber coating.

Price: \$18,900 + GST
